

PROJECTFUSION Virtual Data room 2.10

PROJECTFUSION allows firms to collaborate with clients, and conduct due diligence over the Internet using a highly secured website. Documents are kept in folders, and you have complete control over who can view, print & modify them.

PROJECTFUSION is supported 24x7x365 and hosted in SAS 70 Level II compliant European Data Centres. Your data never leaves Europe unless you request US or Hong Kong hosting.

YOUR DATAROOM, YOUR WAY

Simple brand integration is provided at no cost. Other options include complete integration with your website, and links to your key website pages on logout. All pages and features are customisable to meet your requirements.

STRONG PROTECTION

Location Based Restrictions

The data room can automatically lock users to their first log in location. This key feature prevents information leaks & insider trading.

SMS Token Authentication

Optional SMS token security provides hassle free, very secure 2 tier authentication.

Anti Key Logging Software with Sentry Bay

Prevents theft of ID's, passwords and keystrokes.

Tamper Proof Audit Trail

Every key action on the data room is logged.

Encryption

All documents transmitted with 128 Bit SSL.

Complete Anonymity

No user can guess the existence of another user, or the existence of a document or folder. Data rooms are accessed by a unique URL. Each data room has totally separate user ID's/passwords.

Dedicated Host Option

Your data room can be hosted on a co-located server you control.

SECUREVIEW DOCUMENT PROTECTION

Protects documents with flexible permissions allowing you to restrict:
Printing, Copying, Downloading.

All documents and printouts watermarked 'on the fly' with the users name, date and IP address.

DOCUMENT MANAGEMENT

Automated Index Generation

Our automated indexes save on average 2-10 man days creating an index. Each user receives a personal index for due diligence.

Compressed MD5 Tag for Each Document

We use the latest labelling techniques to uniquely mark each document with tags that work even after the data room has closed. Tags appears on printouts, index and the folder listing, and act as a replacement for Bates Numbers.

Full Text Search in Any Language

Language independent approach using the Levenshtein distance. Any language can be searched.

Threaded Comments

Threaded secure comments can be attached to any document or folder for document review.

Document Check-in/Checkout and Version Control

Documents can be reserved with checkout, preventing other users from making changes.

Meta Data Scheme

Easy to apply meta data allows flexible tagging of large document collections. This enables searches like "Show all documents created Jan 10th for Client X containing the word 'Simplex'".

AUTOMATED NOTIFICATIONS

Daily/Weekly Email

If enabled, users receive a daily or weekly summary of all new files they can see.

Instant Alerts

Send customisable instant alerts when a document is uploaded.

QUESTION AND ANSWER ONLINE*

Simple Workflow

Bidder & Vendor teams can have 'Team Captains' who approve questions/answers before delivery.

Advisor Role

Advisors can view and allocate questions to vendor team members.

Fast Filter

Unique fast filter bar enables easy filtering by question status, questioner & time of asking.

Randomised Question ID's

Random ID's ensure no idea of the number of questions, or number of bidders is suggested.

REPORTING

Daily/Weekly Trend Reports

These reports give key data room usage trends by bid group.

Realtime Reports

Online realtime access, as well as downloads to excel for further filtering.

FLEXIBLE ADMINISTRATION

Granular File and Folder Level Security

Each file and folder can be protected with group permissions.

Easy Standards Based Upload/Download

Easily upload thousands of files & folders using industry standard WEBDAV.

Optional Java uploader allows up to 50,000 files to be uploaded in one go.

Optional plug in allows data room to be mounted like a drive (PC or Mac).

Distributed Administrators

Administrators may be assigned for sub folders. These folder admins maintain their own groups, and may add users. They cannot modify other site wide groups.

Bulk Add Users Via Spreadsheet

Simple spreadsheets allows administrators to upload up to 400 users at once.

HOSTING & SUPPORT

Help Desk

24x7 Help desk.

Online self help.

Hosting

PROJECTFUSION is hosted in SAS 70 Level II compliant European Data Centres.

* Feature introduced December 2008.

"PROJECTFUSION have provided CMS Cameron McKenna with deal rooms for the last 3.5 years. They combine their excellent knowledge and experience to provide a seamless service"

Ben Wightwick, CMS Cameron McKenna.

"It's an easy to work with, user friendly system - we can tailor each data room to our clients' specific security needs"

Mark Smithson, Head of IT, Lee & Priestley LLP.

"We found PROJECTFUSION to be quick to set up, simple to use and backed up by excellent customer support"

*Dan Jones, Director,
Novexin.*
